

CARETREAT ANTIFOAM

Water-soluble silicone based antifoam

- Eco-friendly
- Biodegradable
- Long term activity
- Direct acting

DESCRIPTION

Caretreat Antifoam is a water-soluble antifoam based on a modified activated siloxane polymer. Caretreat Antifoam has a high efficiency and can be used over a wider temperature and pH range than conventional polydimethyl siloxane antifoams. Caretreat Antifoam has been carefully formulated for optimal stability, especially at high temperatures, in order to avoid siloxane precipitation. The selected chainlengths and molecular weight ensures an optimum defoaming effect and prevents foam built-up.

ADVANTAGE

- Can be applied in as well hot as cold water
- Defoams immediately
- Remains active for a long time
- Chemically inert product, resistant to chemical attack

APPLICATIONS / DIRECTIONS FOR USE

Caretreat Antifoam has to be used undiluted for maximum efficiency. Experimental trial is the best way to determine the optimal dosage of the product. Generally the optimal antifoam dosage is between 10 and 100 ppm according to the application and to the stability of the foam. Caretreat Antifoam can be diluted in either hot or cold water to obtain a better dispersability in the foaming medium, but the efficiency of the antifoam will be affected.

In case of dilution we recommend not to exceed a dilution ratio of 1:10. The diluted product must be used immediately.

DOSAGE

See Applications / Direction for use.

PROPERTIES

| | |
|-------------------|-----------------------|
| Article number | 14407 |
| pH (1 % solution) | 7 |
| Density | 1,0 g/cm ³ |
| Flashpoint | Not applicable |
| Physical state | Liquid |

APPROVALS

For detailed information on safety and health, please refer to the Material Safety Data Sheet MSDS and/or product label.
